Art Unit: 2821

DETAILED ACTION

1. This office action is responsive to the response to the restriction requirement filed 05/13/2009.

Claim Objections

2. Claim 32 is objected to because of the following informalities: In claim 32, line 6, the recitation "a first conductor" should be changed to --the first conductor-- if it is the first conductor defined in line 2. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. Claims 27, and 30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 27 recites the limitation "the second conductor" in line 9. There is insufficient antecedent basis for this limitation in the claim.

Claim 30 recites the limitation "the plurality of second side radiating elements" in lines 2, 3 and 4. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-41 rejected under 35 U.S.C. 102(b) as being anticipated by Dienes (US Patent 5,339,089), cited by applicant.

Application/Control Number: 10/817,353 Page 3

Art Unit: 2821

Dienes discloses, in figures 2-5, an antenna device comprising a substrate 40 having a first side and a second side, a first conductor 10 coupled to the first side of the substrate, a second conductor 12 coupled to the second side of the substrate, the first conductor comprising a feed element 44, a terminal element, a plurality of wide elements and a plurality of narrow elements, the second conductor comprising a plurality of wide elements and a plurality of narrow elements, wherein the wide elements of the second conductor are substantially align beneath the narrow elements of the first conductor and the narrow elements of the second conductor are substantially align beneath the wide element of the first conductor, the terminating element having a short 50 coupled to the wide element of the second conductor, and a power feed element 42 connected to the feed element and to the second conductor.

6. The patents to McGrath, Merenda et al, and Ligander et al are cited as interest showing the antenna similar to that disclosed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tan Ho whose telephone number is (571) 272-1822. The examiner can normally be reached on M-F (8:00AM - 5:00PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Douglas Owens can be reached on (571) 272-1662. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
